

The first assignment will be about the dialogFlow chatbot. I ask you to create a Telegram chatbot with **at least**:

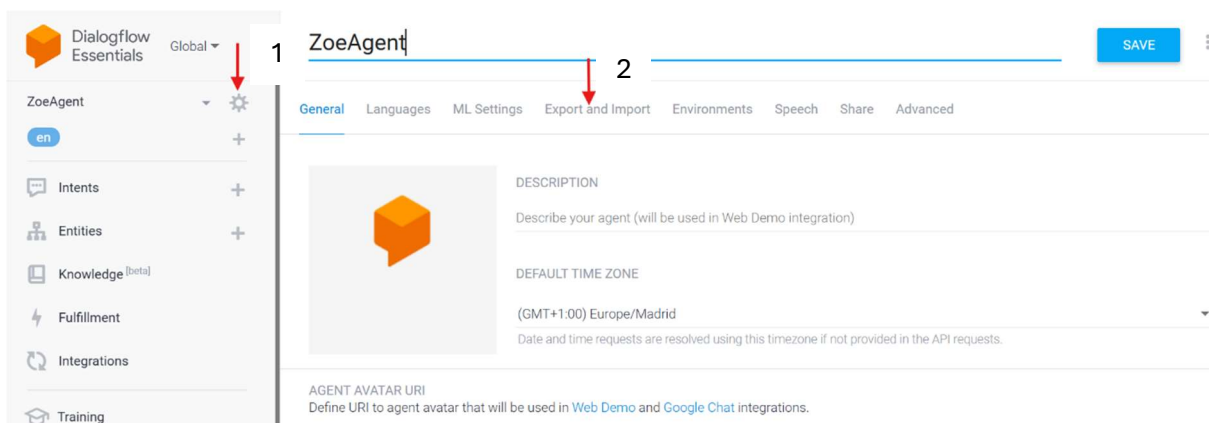

- 3 intents
- 1 follow-up intent
- 1 custom-built entity

I ask you to focus your effort on creating a human-like interaction rather than a complicated real application. I will test all of your bots and I should be able to understand how to interact. If you have any doubts please write to me either on Teams (Zoe Betta) or by e-mail (zoe.betta@edu.unige.it)

To be delivered:

- 1 zip file with your chatbot
- 1 txt file with the name of the Telegram chatbot

First step:

Then “export as Zip”
